Maintain water feature *beauty* this season with a **stress-free**
ANNUAL SPRING PONDLESS/FOUNTAINSCAPE CLEANING

Why: Spring water feature cleaning is MESSY as it involves the removal of all sludge and waste build-up that has accumulated on the rocks, in the water and in the filtration system. Excessive build-up is the #1 cause of poor water quality and excessive algae growth.

Let Dreamscapes handle the mess and hassle for you!

When: Maintenance should be done in spring, before your water garden completely awakens from its winter dormancy. If a cleaning is performed in summer after beneficial bacteria colonies form (when water temperature is hot), the ecosystem will be thrown out of whack, and your water feature will go through a "green phase" with algae until it recolonizes beneficial bacteria.
